Receiving to kitchen: store room stock control

Ground-floor cold room and dry store · both outlets · Draft for owner review

RECEIVE

1 Delivery arrives, check the PO ADMIN

Match the supplier and items to an open PO before anything is unloaded.

Control: no PO, no receipt. Receiving only inside the 2 fixed windows.

No PO or wrong supplier

Hold at the door. Call SCM. Refuse if not cleared.

2 Check goods against the invoice ADMIN

Quantity, quality, temperature (cold goods), expiry, and invoice price against PO price.

Control: weigh or count in front of the driver. Note any difference on the delivery note.

Fails the check

Reject or return, written on the delivery note. Price difference: tell SCM the same day.

3 Put away and enter the receipt ADMIN SYSTEM: GRPO

Goods go straight into the correct room, covered and labelled with the received date. Enter the GRPO after each receiving window, the same day.

Control: nothing is left on the floor or in the corridor. GRPO quantity is what was counted, not what the invoice says.

KEEP

4 One custodian per room CUSTODIAN

A named custodian and a named backup for the cold room and for the dry store. The room is locked outside the issue windows.

Control: nobody else holds a key. Service team does not enter to store equipment or take items.

ISSUE TO KITCHEN

5 Two issue windows a day: morning and afternoon KITCHEN RUNNER CUSTODIAN

One named kitchen runner collects for all sections. The custodian hands over and the runner signs the issue log: item, quantity, time, section.

Control: the issue log is the only record of what left the room. No log line, no goods out.

6 Outside the windows KITCHEN RUNNER

Nobody walks in. An urgent need goes through the runner and the custodian, and is written in the log with the time and a reason.

Control: the owner reviews urgent lines weekly. Many urgent lines mean the window quantities are wrong.

BALANCE

7 Daily balance at close CUSTODIAN SYSTEM: BALANCE TOOL

Opening + received − issued = expected closing. Count the top items by value (whipping cream, cheese, proteins) and compare.

Control: a difference is explained before the first issue next morning. An unexplained difference goes to the Finance lead.

8 Handover when the custodian leaves CUSTODIAN NEXT HOLDER

Hand over the key and the log to a named next person, who signs. Evening proposal: the manager on duty holds the key and logs every entry.

Control: a room never has an unnamed holder. The signature line is on the log page.

COUNT

9 Weekly count and month-end count CUSTODIAN ACCOUNTANT SYSTEM: ADJUSTMENT

Weekly: high-value items. Month-end: full count with a freeze, a fixed counting order (top to bottom, right to left) and signed count sheets. Adjustments are entered after the cut-off with approval.

Control: no receipts or issues during the freeze. A recount is done by a second person.

WHEN TO ENTER THE SYSTEM

Event	Enter	What to enter
Goods received	GRPO, same day	PO no., item, counted qty, invoice price, delivery note. Photo of invoice.
Waste or damage	Goods issue, same day	Item, qty, reason, who approved.
Return to supplier	Return document, same day	Item, qty, reason, signed delivery note.
Transfer between outlets	Dispatch note, signed at both ends	Qty in kg and in pieces at both ends. Vehicle sealed.
Kitchen issue	Daily balance tool	From the issue log, end of day.
Count difference	Adjustment after cut-off	Counted vs system qty, reason, approval.

To confirm: kitchen issues stay in the balance tool and are not keyed into SAP.

DAILY BALANCE TOOL

Date	Item	Opening	Received	Issued	Expected	Counted	Diff	Who
·	·	a	b	c	a+b−c	d	d−(a+b−c)	·

Issued comes from the runner's signed log. Counted is the physical count at close.

FIVE RULES

- No PO, no receipt.
- Goods are in a room the same day they arrive, and in the system the same day.
- Only the custodian opens the room. Only the runner takes goods.
- Two issue windows a day. Anything else is logged as urgent.
- Every difference has a name and a reason before the next morning.
